About Me

3.5+ years experienced quality focused Full Stack Developer with a record of delivering high quality, robust and reliable software. Having propensity to write reusable, understandable and optimal code while keeping in mind best practices and standards. Profound insight and knowledge of front end and backend development technologies, frameworks, libraries, databases, architecture styles, patterns, and algorithms. I consider myself really good at Angular, React, JavaScript, SQL and Relational databases because I have worked on these technologies extensively and try to learn more about them every day.

Top Projects

RapidFlow Platform - AbbVie Inc. (Angular, C#.NET, SQL Server)

A custom developed web based platform that automates complex business workflows. Became a principal platform within the organization for automating all kind of workflows and is used by 35000+ of employees, replacing all previous solutions and implementations of workflow automation.

RapidFlow App Studio - AbbVie Inc. (Angular, Node.js, Nest.js, Postgresql)

A web based Integrated development environment(IDE) for developing business processes for RapidFlow Platform used by hundreds of developers within the organization, providing advanced features like syntax highlighting, version control, IntelliSense and many others, making the development of business processes seamless for the developers.

GoHab - Personal Project (React, Firestore, Google Cloud Functions)

Elegantly designed, intuitive and engaging web application focusing on personal development by allowing users to manage and track personal goals, habits and tasks effectually. Offers extensive features including tracking habits, calendar views, notifications, reports and charts of viewing progress and much more..

Ndis Distribution Management System – Freelance (C#, Windows Form, SQL Server, SSRS)

A windows form application for tracking distributions, sales and purchases. Offers extensive reporting facilities for better tracking and analyzation of transactions. Being used extensively as the primary system for distribution management within client's organization.
